

## In class exercises #5

1. **What's your name?**

---

2. **What's true about Viewstamp replication? Select all that apply**

*Check all that apply.*

- It is a leader election algorithm
- It handles the failures of the backups in primary-backup replication
- It handles the failures of the primary
- It ensures all the replicas are sequentially consistent
- Other: \_\_\_\_\_

3. **What's true about primary backup replication?**

*Check all that apply.*

- There can only be one primary (leader) at a time
- There can be more than one primaries that order requests concurrently
- If the primary is correct, the system won't fail as long as there are more than half correct nodes
